

PRODUCT CATALOGUE Vol.4

www.empteezy.co.uk

Company Overview

Empteezy® is the home of quality engineered spill containment and spill control products. Our overriding aim is to help you comply with legislation and implement best practice in connection with your oil and chemical storage needs, spill response programmes (including spill kits, emergency safety shower and tank shower applications and waste handling projects.)

With our products tailored to meet the requirements of a variety of different working environments including industrial, commercial, military, marine and educational setting, we manufacture in excess of 70% of the products available in our portfolio in our own factories, making us well placed to provide you with expert advice on how our products can help you meet UK, EU and International Standards relating to spill containment and spill control of most liquids.

Customer satisfaction is of paramount importance to us which is why we aim to provide a complete service and develop long term relationships. We will always work with you to resolve any issues that are encountered in a timely and professional manner.

Empteezy® is an ISO 9001, ISO 14001 & OHSAS 18001 accredited company. We use the vast array of experience we have amassed over the years to provide practical advice over the phone or by email, regular blogs on industry related topics, a web based advice centre and free of charge confidential site assessments with detailed follow-up reports.

PROFESSIONAL BODY MEMBERSHIPS

CUSTOMER INFORMATION

Monday to Thursday 09:00 to 17:00 Friday 09:00 to 15:00 or anytime at www.empteezy.co.uk

You can use any of the following methods, our aim is to make the process as uncomplicated as possible.

- Business Credit Account
- Company Purchase Card
- Credit Card
- Debit Card

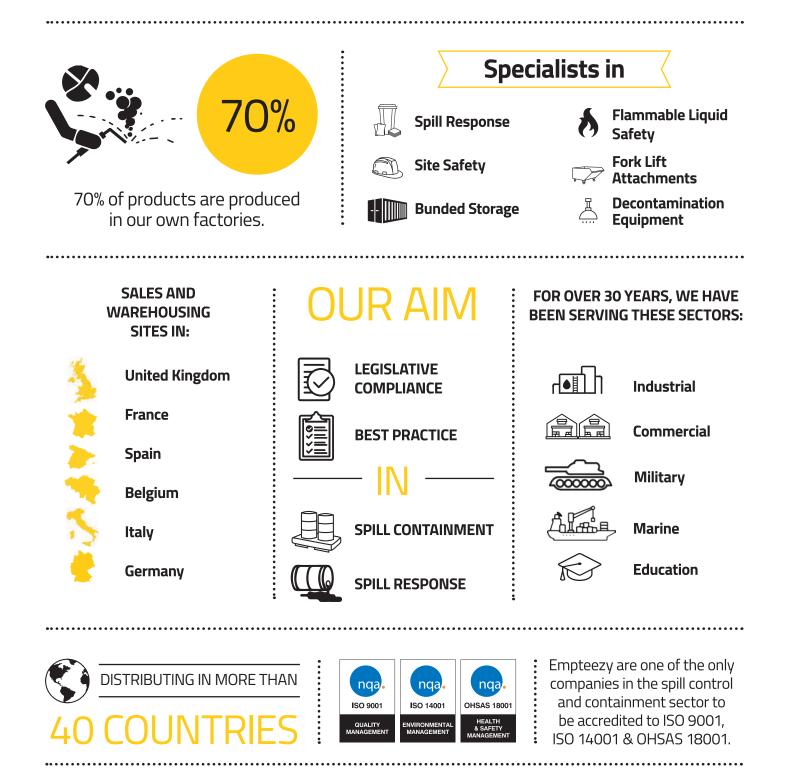

Our prices include delivery to mainland UK addresses but do not include unloading or positioning of the goods. If you do not have off loading facilities we have options available so please discuss with us prior to ordering.

Empteezy reserves the right to amend the prices shown in this catalogue without notice.

- Since 1986 -

EMPTEEZY - SPILL CONTROL PRODUCT - Vol.4

EMPTEEZY'S PROMISES TO YOU AS A CUSTOMER

REASONS TO ORDER FROM EMPTEEZY

3 & 20 YEAR GUARANTEES

Over and above your statutory rights we offer a 3 year guarantee on our rotationally moulded polyethylene products and a 20 year structural guarantee on our DS – DPU – IB – CB – CS steel products.

PRICE PLEDGE

We will price match any product of the same quality and if after purchase you find the same product at a lower price we will refund the difference.

*This offer does not apply to promotional and/or sale prices.

BULK DISCOUNTS AVAILABLE

Discounts are available for bulk purchases of individual products, please contact us to discuss your options.

FULLY TRAINED STAFF

We are available to offer application advice, confirm product details, arrange site visits and identify possible savings.

ON HAND TO CHOOSE THE RIGHT PRODUCTS

RELIABLE, STRAIGHT FORWARD, UNCOMPLICATED & TRUSTWORTHY:

With years of experience designing and manufacturing quality engineered products in conjunction with our customers, we are well placed to help you select the right product for your specific application. Our aim is to establish a long term relationship and to become the company you turn to for fast, and reliable information.

FREE SITE ASSESSMENTS

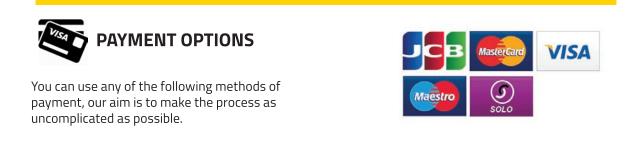

Uncertain as to your requirements regarding Health & Safety Regulations and legislatory compliance? Not to worry, our experts are on hand to conduct a free site assessment of your requirements.

CONTACT US

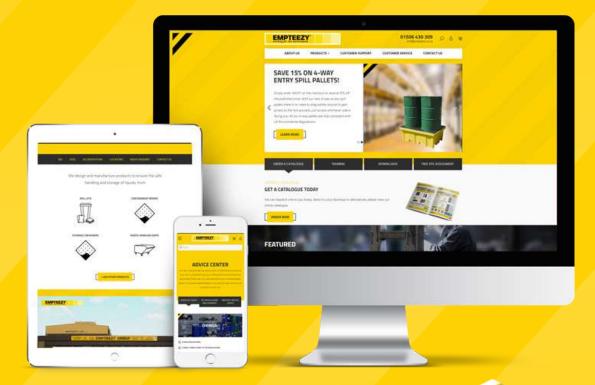

We want it to be easy for you to contact us, whether that's with a general enquiry, to place an order, progress an existing order or to make a complaint.

THE CONTROL OF POLLUTION (OIL STORAGE) (ENGLAND) > REGULATIONS 2011

WHERE DO THE REGULATIONS APPLY?

These regulations apply in England. Scotland, Wales and Northern Ireland have separate regulations.

The container must be situated within a secondary containment system which satisfies the following requirements: It must have a capacity of not less than 110% of the container's storage capacity or, if there was more than one container within the system, of not less than 110% of the largest container's storage capacity, or 25% of the aggregate storage capacity, whichever is greater.

WHAT TYPES OF OIL CONTAINERS ARE COVERED BY THE REGULATIONS?

The regulations apply to:

- Tanks (can be permanent or temporary).
- Drums greater than 200ltr capacity.
- Intermediate bulk containers (IBCs).
- Mobile bowsers.

- Oil storage containers can be made from a variety of materials, for example polyethylene or metal, but all should be designed and manufactured to hold oil and must be 'fit for purpose' while they are being used. The Environment Agency regard an Intermediate Bulk Container (IBC) as being permanent oil storage and the requirements for fixed tanks apply.

WHICH TYPES OF OIL ARE COVERED?

The regulations cover all types of oil, except waste mineral oil. This includes petrol, diesel, bio-fuels, vegetable oils, synthetic, mineral oils and oils used as solvents. Biodegradable oils are also covered.

ARE CROWN SITES EXEMPT?

NO, they must comply with the regulations, although the Environment Agency can't prosecute for non-compliance, they can ask the court to serve a notice which would require improvements to be put in place.

DO THE REGULATIONS COVER THE VOLUME OF OIL STORED OR THE SIZE OF THE CONTAINER?

The regulations cover the size of the container. For example, sites with an oil tank of 1000ltr which only ever have 150ltr of oil stored would still have to comply.

Require more information on Oil Storage? Visit www.gov.uk/government/organisations/ environment-agency

№ 01506 430309
 ∞ advice@empteezy.co.uk

THE WATER ENVIRONMENT (OIL STORAGE) (SCOTLAND) > REGULATIONS 2006

DO THE REGULATIONS APPLY TO ME?

YES if you store any of the following kinds of oil:

- Petrol.
- Diesel.
- Mineral oil.
- Heating oil.
- Lubricating oil.
- Waste oil.
- Vegetable and Plant oil.

The regulations apply to any kind of container which is used to store oil above ground, whether inside or outside including fixed tanks, intermediate bulk containers, drums (oil drums or similar containers used for storing oil) or mobile bowsers.

Containers must be stored/placed within a secondary containment system which satisfies the following requirements: it must have a capacity of not less than 110% of the container's storage capacity or, if there is more than one container within the system, of not less than 110% of the largest container's storage capacity, or 25% of the aggregate storage capacity, whichever is greater.

KEY REQUIREMENTS OF THE REGULATIONS.

The regulations set design standards for new and existing above ground oil storage facilities:

Where oil is stored in any portable container with a storage capacity of less than 200ltr, the container must be of sufficient strength and structural integrity to ensure that it is unlikely to burst or leak in its ordinary use.

Where the container has a storage capacity of 200ltr or more, the regulations require provision of a secondary containment (a bund or drip-tray) to ensure that any leaking or spilt oil cannot enter the water environment.

IS STORAGE WITHIN BUILDINGS COVERED BY THE REGULATIONS?

YES, Oil storage within buildings must comply with the regulations.

Need more information about Oil Storage? Visit www.sepa.org.uk

CONTROL OF POLLUTION (OIL STORAGE) NORTHERN IRELAND > REGULATIONS 2010

DO THE REGULATIONS APPLY TO ME?

YES, if you store any of the following kinds of oil:

- Petrol.
- Diesel.
- Mineral oil.
- Heating oil.
- Lubricating oil.
- Waste oil.
- Vegetable and Plant oil.

The regulations apply to any kind of container which is used and stored on premises above ground, whether inside or outside a building. This includes fixed tanks, intermediate bulk containers, drums (oil drums or similar containers used for storing oil) or mobile bowsers.

The container must be situated within a secondary containment system which satisfies the following requirements: It must have a capacity of not less than 110% of the container's storage capacity or, if there is more than one container not less than 110% of the largest container's storage capacity, or 25% of the aggregate storage capacity, whichever is greater.

KEY REQUIREMENTS OF THE REGULATIONS.

The regulations set design standards for new and existing above ground oil storage facilities:

Where oil is stored in any portable container with a storage capacity of less than 200ltr, the container must be of sufficient strength and structural integrity to ensure that it is unlikely to burst or leak in its ordinary use.

Where the container has a storage capacity of 200ltr or more, the regulations require provision of a secondary containment (a bund or drip-tray) to ensure that any leaking or spilt oil cannot enter the water environment.

IS STORAGE WITHIN BUILDINGS COVERED BY THE REGULATIONS?

YES, Oil storage within buildings must comply with the regulations.

Require more information on Oil Storage? Visit www.doeni.gov.uk

THE WATER RESOURCES (CONTROL OF POLLUTION) (OIL STORAGE) WALES > REGULATIONS 2006

DO THE REGULATIONS APPLY TO ME?

The regulations apply to oil storage facilities that are above ground or in buildings with a storage capacity of more than 200L. The regulations also apply to waste oil storage and replace the agricultural fuel oil storage provisions of the Water Resources (Control of Pollution) (Silage, Slurry and Agricultural Fuel Oil) (Wales) Regulations 2010.

The regulations do not apply to any;

- Containers with a storage capacity of 200L or less.
- Existing container serving premises used wholly or mainly as a private dwelling.

Cyfoeth Naturiol Cymru

Natural

Wales

Resources

- Container that is wholly underground.

KEY REQUIREMENTS OF THE REGULATIONS.

All new, above ground oil storage containers must have secondary containment to prevent leaks and oil escaping into the wider environment.

The requirements are that;

- Single containers must have containment capable of storing 110% capacity.
- Multiple containers must have containment capable of storing 110% of the largest tank capacity or 25% of the total aggregate capacity, whichever is the greatest.

The regulations also set out specific container and facility construction standards and required equipment standards (for example, for tap valves and sight gauges) for oil storage facilities, including mobile bowsers.

Require more information on Oil Storage? Visit www.naturalresources.wales

CHOOSING THE RIGHT ABSORBENTS FOR YOUR APPLICATION

WHAT ARE MY CHOICES?

In simple terms polypropylene absorbents are available in 3 distinct colour coded types:

MAINTENANCE

Coloured coded grey maintenance absorbents will absorb:

- Water.
- Hydrocarbons (Oils and Fuel).
- Coolant.
- Cutting fluids.
- Inks.
- Mild solvents.

The grey colour allows the product to blend in to the workplace when they are being used pro-actively to contain and absorb minor leaks from plant and machinery.

OIL SELECTIVE

Coloured coded white oil selective absorbents will absorb:

- Hydrocarbons (Oils and Fuels).
- They will not absorb water, which makes them ideal for taking "oil" off water or dealing with land based spills in the rain.

The white colour helps you easily see that the product is working when, for example you are dealing with spills on water.

CHEMICAL

Colour coded yellow chemical absorbents will absorb:

- Acids & Caustics, in fact almost any liquid which makes them ideal for situations when you are unsure/don't know what the spilt liquid is.

The yellow colour acts as a "hi-vis" warning that the spill is likely to be of an aggressive liquid and additional care should be taken.

DIFFERENT FORMATS

Irrespective of the type of absorbent (maintenance, oil selective or chemical) the absorbents are available in different formats designed to help you deal with different applications effectively.

Pads

Designed to allow you to deal with minor leaks, drips and spills, they can be used proactively to line parts trays, catch drips or absorbs and clean up after a minor incident.

Rolls

Allow you to run out a longer length of absorbent quicker than placing individual pads down. Run a length out under a conveyor to catch drips and overspray, place a length along the shoreline to catch spilt oil lapping on the shoreline.

Cushions

Because they absorb more than a pad, cushions are ideal for clean-up after a large spill has been contained and applications like lining drip trays, which makes them easier to empty without spilling the captured liquid.

Socks

Use them proactively around the base of leaking plant or machinery to contain and absorb the liquid and stop it spreading and becoming a slip hazard or damaging the local environment. They can of course be used as part of your spill response measures to contain and absorb liquids spilt accidently.

Booms

These large diameter products are ideal for containing and absorbing large spills and in the case of the oil selective booms are designed for use on inland waterways, rivers, ponds, settling ponds etc.

COLOUR CODED ABSORBENTS THAT CONFORM TO BRITISH STANDARDS BS 7959

SUPERIOR ABSORBENTS BY EMPTEEZY

Are you equipped for an oil or chemical spill? At Empteezy we manufacture a wide range of absorbents each designed to deliver optimum performance in specific situations. Use this guide to help you select the best solution for your facility.

All our absorbents fully comply with British Standards Institute BS 7959 parts 1, 2 & 3 and are submitted to rigorous product testing and tracking including:

- Retention Capability
- Strength Testing
- A Resistance to Abrasion
- A Reaction to Heat

APPLICATION	LIQUIDS	COLOUR	NAME
Suitable for dealing with everyday leaks, drips and overspray from machinery, conveyors and valves.	Oils, coolants, cutting fluid, mild solvents, water.	Grey	Maintenance
Suitable for dealing with everyday leaks, drips and overspray from machinery, conveyors, valves and also dealing with outdoor spills on land or water.	All hydrocarbons including: fuel oil, diesel, petrol, lubricating and cutting oil.	White	Oil Selective
Locations that use or store chemicals such laboratories, drips and overspray from dip tanks etc.	Almost all liquids including: acids, alkalis, hydrocarbons, coolants, cutting fluids and water.	Yellow	Chemical

EMPTEEZY'S CONTAINED ABSORBENTS

More effective and less time consuming to clean-up than clay granules, sawdust, rags etc. These products are available in different formats to suit different applications and can be used proactively as part of day to day housekeeping or as part of an emergency response program. They are quick to deploy, fast to recover and are disposed of in accordance with local authority guidelines (they can be incinerated to less than 1% ash).

SUPPORT AND ASSISTANCE > FREE SITE ASSESSMENTS

Keeping on top of changes in legislation can be time consuming and costly if you fail to do so. With Empteezy you have access to our free, confidential and without any onus advice on how to ensure your facility is fully compliant with regulations and/or audit standards such as ISO 14001.

Our team of field based managers (supported by our office based team) are available to provide you with objective advice on spill containment & spill response related issues and can if required even provide a fully detailed site assessment report for you.

SITE ASSESSMENT ADVANTAGES

- An outside pair of eyes will often spot something that has become common place to you.
- You get recommendations based on the latest legislative and/or audit standard updates.
- Implementing best practice will reduce the risk to staff and the environment and can help reduce insurance premiums and lessen the risk of 3rd party claims.

AREAS COVERED

Delivery of containers to site	~
Movement of containers around site	
Storage of full and empty containers	_
Storage of waste and waste handling

SPILL KIT GUIDE

1. ASSESS

As soon as you encounter a spill and until it has been successfully dealt with, you must constantly assess the risk it poses to personnel, the environment and property. SAFETY ALWAYS COMES FIRST. Try and determine what the liquid is, the quantity involved and if there are any casualties. NEVER try to deal with the spill on your own, inform colleagues and wait until at least one other person is in attendance. Remember to replenish all your absorbents kits and back up stock along with disposed of PPE drain blockers etc.

2. PROTECT

Always wear the appropriate P.P.E. (personal protection equipment) to allow you to safely respond to the spill. Check M.S.D.S. (material, safety data sheets) for the hazards associated with the liquid spilled and then dress accordingly. IF IN DOUBT, ASSUME THE WORST AND WEAR THE HIGHEST LEVEL OF P.P.E.

3. CONTAIN

By containing the spill you buy time. You should also reduce the area of contamination and lessen the impact the spill will have. Use absorbent seals and booms or poly booms to provide a fast, effective containment barrier.

4. STOP THE SPILL

Once the spill is contained; STOP the source of the spill. Roll a drum damaged side up, turn a tap off, plug a hole etc. If appropriate decant any remaining liquid into a vessel. Remember NEVER step in the spill.

5. RE-ASSESS

After the spill has been contained and the source controlled, reassess the entire situation before starting clean-up. Ensure that the spill is fully under control.

EMPTEEZY

working for the environment

6. CLEAN UP

This can be as simple as wiping up with absorbent pads or using a cushion on deeper spills. Treat all contaminated material as the liquid spilled and dispose of accordingly.

7. DECONTAMINATION

Ensure all the personnel involved with the spill are fully decontaminated. The site of the spill, all P.P.E. & equipment must also be fully decontaminated and checked. If items have been damaged or cannot be fully decontaminated, dispose of accordingly and replace with new.

8. REPORT AND REPLENISH

Compile a complete report of the incident and fill out all associated paperwork. De-brief all personnel involved and learn from the experience. If needs be, change your procedures and/or the location of some or all of your spill kits. You will be better prepared should there be a next time. Remember to replenish all your Spill Kits and back-up stocks along with disposed of P.P.E., Drain Blockers etc.

♦ 01506 430309 ∽ advice@empteezy.co.uk

SPILL RESPONSE KITS> CHOOSING THE RIGHT SPILL KITS FOR YOUR SITE

CHOOSING THE RIGHT SPILL KITS FOR YOUR SITE.

Having the right spill kits and equipment in place along with trained staff to respond to a spill is fundamental to having a site spill response plan that will deliver in the event of an incident. Whether you already have a site response plan in place or you are about to start the process its worth going back to basics to ensure you understand your site as a whole.

HAVING THE ANSWERS TO THE FOLLOWING QUESTIONS WILL HELP YOU UNDERSTAND WHAT YOU NEED:

- What liquids are on site?
- Where on site are the liquids stored?
- What are the liquids stored in (drums, IBC or bulk)?
- What quantities of each type of liquid are held on site?
- How are the liquids handled & distributed around the site?
- Are there any work related activities that could increase the risk of a spill?
- Do any of the identified risk areas link to each other?
- If you have spills of incompatible liquids can they combine to create a new issue?
- Do you have a detailed site drain map?
- Are all the drains on site clearly colour coded as either foul or surface water?
- Do you have a site interceptor & if yes how often is it cleaned out?
- Do you have a consent to discharge licence?
- Do you have an inventory of all the spill response products on site?
- Do you have a site map showing the locations of your spill response equipment?
- Do you have historical data on any previous spills on site?

Understanding what liquids you have and in what quantities and how they are stored and used will help determine the types and sizes of spill kits you require. Remember to consider questions such as whether the kit needs to be mobile, or ease of access to the spill area.

NEED ADVICE? OR WANT TO ARRANGE A SITE ASSESSMENT? CONTACT US ON:

01506 430309

🔿 advice@empteezy.co.uk

Or advice@empteezy.co.uk

SPILL KIT GUIDE

Kits should be located in the spill area and remote from it allowing you to cover all eventualities. A common mistake is to over specify the size of kit, it only needs to be appropriate to the spill potential and your response plan should make provision to utilise kits from other areas in the event of a major incident. As an example if you have a spill from a 205ltr drum, you don't need a 205ltr absorbent capacity spill kit as you are likely to role the drum hole side up, or plug the hole in some way so the reality is that you might lose up to 40% so a spill kit of circa 90ltr capacity supported by other site kits would be more than adequate.

SPILL RESPONSE KITS

"KITS SHOULD BE LOCATED IN THE SPILL AREA AND REMOTE FROM IT ALLOWING YOU TO COVER ALL EVENTUALIITIES."

Understanding potential spill path(s) any spilt liquid may take and whether your site is fully contained will allow you to determine what additional spill response equipment you will require.

- Drum sealing devices such as putty, wooden dowels or sealing straps.
- Temporary drain covers (disposable or reusable).
- Secondary containment system such as bunded stores.
- Non absorbing barriers to divert/contain liquid in a controlled manner.
- Drain sealing devices.
- Non absorbing containment booms.
- Decontamination showers for personnel involved in the spill.
- A complete survey of your site will quip you with the information you need to choose the correct spill kits and support equipment. We are happy to carry out this work for you and provide a fully detailed written report. This service is free of charge, without any onus on you to purchase anything and completely confidential.

OIL SELECTIVE SPILL KITS

Oil selective spill kits allow you to absorb "oil" off water or deal with land based spills in the rain. The absorbents in each kit will float on water making them perfect for a wide range of water based spill applications. Booms can be proactively deployed at an outfall to contain and absorb spilt oil and cushions can be placed in drains with lanyards attached for easy retrieval.

SPILL RESPONSE KITSOVERPACK SPILL KITS

OVERPACK SPILL KITS

UN approved (X rated) overpack spill kits available in maintenance, oil selective and chemical formats, with the added advantage of providing an approved container to ship the used absorbent for disposal once the spill has been fully dealt with. There are 3 sizes of kit with absorbent capacities of 60ltr, 90ltr and 250ltr and the containers have course thread screw-top lids which are easy to secure and the largest version has "shoulders" that allow it to be picked up with a forklift truck.

60 LITRE OVERPACK KITS

The 60ltr kits are ideal for small spills. The container is fitted with handles to aid movement to and from different locations.

Each Spill Kit contains: 40x pads 50cm x 40cm, 5x 1.2m socks, 4x waste bags & ties.

Container: UN rated 1H2/X57/S (R1650 - 57kg gross weight).

90 LITRE OVERPACK KITS

The 90ltr spill response kit can be used in a designated area and provide additional cover as part of your site wide spill response programme.

Each Spill Kit contains: 48x pads 50cm x 40cm, 8x 1.2m socks, 6x waste bags & ties.

Container: UN rated 1H2/X120/S (R1600SL - 120kg gross weight).

FOLDING DRAIN COVER> UNIVERSAL FOLDING DRAIN COVER

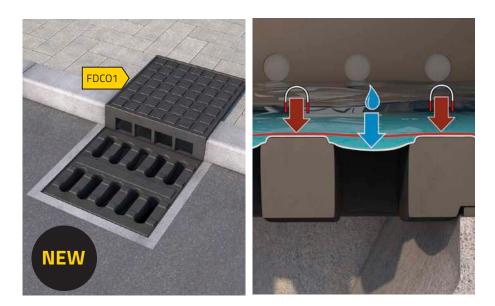

FOLDING DRAIN COVER

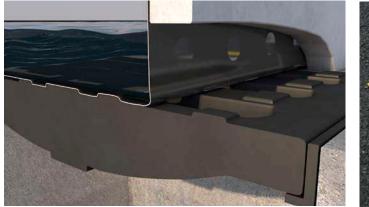

A universal folding drain cover for quick protection of drains, especially drain grates with side gates. Perfect for deployment in the event of a spill the reusable folding drain cover works with steel and horizontal plastic sewer grates.

Simple to use; just ensure the surface of the grate is clear of debris and then deploy the drain cover with its membrane side down, i.e. the inscription side up. It is compatible with all common chemicals according to the resistance list and is effective in the temperatures of -20° C to $+60^{\circ}$ C.

The drain cover works by using the physical effect of pressure difference by using a thin, highly flexible foil which is exposed to hydrostatic pressure thus creating perfect adhesion to even irregular surfaces. The foil is highly chemically resistant, flexible and strong and is attached to a flexible and magnetic foil with openings which allow liquid access to the bottom PUR foil.

Material: Magnetic isotropic foil 0.9 mm, special flexi PUR foil 0.06 mm and PES/PVC foil.

THE SIMPLE SOLUTIONS TO PROTECT OUR DRAINS AND HELP THE ENVIRONMENT

ORDER ONLINE WWW.EMPTEE2		FOLDING DRAIN COVER	All our prices include delivery to a mainland UK address

FDC 01	Universal folding drain cover Drain cover size: 750mm x 630mm x 0.9mm		Pack size: 650 x 340 x 10mm	1.5kg	£151.00

RE-USABLE DRAIN COVERS

Manufactured from polyurethane these mats have a naturally sticky finish to one side which provides a mechanical grip to the surface they are used on.

After use it is advisable to clean any particles that may have adhered to them (mild soap solution, but don't wipe with a cloth as fibres will stick to the mat).

When selecting a mat always try and oversize by a minimum of 100mm to ensure a positive seal.

MAGNETIC DRAIN COVER

DAMMIT CLAY MATS

HOW TO USE:

1. Remove outer packaging, **2.** Remove bottom layer to expose mat, **3.** Press down onto drain surface. **4.** Remove top layer and its ready.

You can "knit" more than one mat together to deal with oversized drains. After use treat as the liquid that it came into contact with and dispose of accordingly.

WALL BOX FOR DAMMIT MAT

— Galvanised steel.

— Can hold 2 large Dammit mats.

RS

These reusable magnetic drain covers adhere to all metal surfaces. They are extremely flexible, weather resistant and works well in high and low temperatures of between -20.

> SPILL RESPONSE > JUSTRITE® BERMS

JUSTRITE® RIGID-LOCK QUICKBERM

Many jobs are carried out in the great outdoors and involve the use of fuels, lubricants, chemicals etc. The need to have equipment in place to protect employees and the environment is as necessary in these "remote" working environments as it is in any purpose built facility, but the challenge can sometimes be to get practical solutions in place. Justrite® rigid-lock QuickBerms are in effect "fold-up" spill pallets which can be used in almost any terrain or environment and require no tools to erect or take them down. So if you work for example in; Forestry, Track maintenance, Civil engineering, Construction or Utilities, such as maintaining transformers at electricity substations, these are the perfect solution to your temporary storage of liquids in a bunded area.

Liquid tight, single piece construction with no assembly required, this UV resistant, tough and durable, modified PVC coated fabric bund withstands petroleum, oils, grease and most acids.

PLEASE NOTE: FOR EXTERIOR DIMENSIONS PLEASE ADD 254MM TO THE LENGTH & WIDTH TO ALLOW FOR THE SUPPORTS AND GROMMETS. WHEN SELECTING A UNIT SIZE PLEASE ALLOW 305MM FOR THE LOWERING AND RAISING OF THE WALL

SPILL RESPONSE > IUSTRITE® BERMS

JUSTRITE® RIGID-LOCK OUICKBERM

Unlike other portable bunds which are susceptible to wall collapse and containment failure the patented Rigid-Lock stainless steel internal brace support system holds each wall at a full 90° locking them in position for secure, leak proof containment and the system also provides maximum usable space inside the bund and greatly reduces trip hazards around the bund perimeter.

With the walls in the "drive-in" position, the bund can withstand vehicle weights in excess of 5,000kg at each tire and when in the "contained" position the supports will maintain the integrity of the bund against wind loads of up to 40mph. For further security, each of the supports is fitted with a heavy-duty brass grommet for anchoring the bund under high wind conditions (anchor stakes not included). Should the bund fill completely with liquid the Rigid-Lock support system will hold the walls without bending or buckling.

PLEASE NOTE: FOR EXTERIOR DIMENSIONS **PLEASE ADD 254MM TO THE LENGTH & WIDTH TO ALLOW FOR** THE SUPPORTS AND GROMMETS. WHEN SELECTING A UNIT SIZE **PLEASE ALLOW 305MM FOR THE** LOWERING AND RAISING OF THE WALL

DIRTEEZE® WET WIPES > WET WIPES

THE DIRTEEZE WET WIPES ARE MADE FROM SPUNLACE, A SOFTER, STRONGER ALTERNATIVE TO MORE COMMON POLYPROPYLENE WIPES, WITH SIGNIFICANT ADVANTAGES ON WIPING PERFORMANCE IN TERMS OF ABSORBENCY AND CLEANING POWER

ROUGH & SMOOTH TRADE WET WIPES

ROUGH & SMOOTH - DGPCL80

- ✓ Micro beaded Hand & Surface Degreaser wipes 80 sheets.
- ✓ Also available as Flowpack of 40 wipes.
- ✓ Microbeads for increased cleaning power.
- ✓ No sticky residue left on hands.
- ✓ A cloth not a wipe.
- ✓ Cosmetic approved 100% safe on skin.
- ✓ Use on surfaces and hands, to remove paint, sealant, foam, caulk & more.

SMOOTH & STRONG TRADE WET WIPES

SMOOTH & STRONG - DGCL

- Spunlace Hand & Surface Degreaser wipes 80 sheets.
- ✓ Twice as effective at removing sealants.
- ✓ Super soft, strong & absorbent.
- Cosmetic approved 100% safe on skin.
 Use on surfaces and hands, to remove paint, sealant, foam, caulk & more.

GLASS & PLASTIC TRADE WET WIPES

GLASS & PLASTIC - GDCL

- ✓ Spunlace Surface wipes 80 sheets.
- ✓ Amazing streak-free finish on glass surfaces.
- Can replace glass spray & paper wiping for convenience.
- ✓ The first glass surface wipe that really works.

DIRTEEZE® ANTIBACTERIAL WIPES > ANTIBACTERIAL WIPES - FOOD SAFE!

ANTICBACTERIAL FOOD RANGE BY DIRTEEZE

Developed for the food sector professionals, Dirteeze Multi-Purpose AntiBacterial Wipes set new standards for cleaning and sanitising food preparation areas and equipment. Innovative wiping material, trusted powerful lotion with maximum kill rates, combined with innovative and flexible packaging options make up the range.

ANTIBACTERIAL WIPES CANISTER

Quat Based sanitising surface wipes for use in the Manufacturing, Catering, Hospitality, Education & other Private/Public sectors. Triple layer blue wiping material with inherent antibacterial properties.

- Quat Based, Alcohol Free, Taint Free, Food Safe.
- Antibacterial kill rate of 99.9999%.
- Outstanding kill rate within 10 seconds.
- Tested against E-Coli, Salmonella, Listeria, MRSA, Test standards, EN1276, EN1650, EN13697.
- 250x sheets.

ANTICBACTERIAL WIPES FLOWPACK

Quat Based sanitising surface wipes for use in the Manufacturing, Catering, Hospitality, Education & other Private/Public sectors.

- Triple layer blue wiping material with inherent antibacterial properties, Quat Based, Alcohol Free, Taint Free, Food Safe, Antibacterial kill rate of 99.9999%.
- Outstanding kill rate within 10 seconds, Tested against E-Coli, Salmonella, Listeria, MRSA, Test standards, EN1276, EN1650, EN13697, 200x shorts.
- 200x sheets.

QUAT FREE WIPES BUCKET

Quat-free sanitising wipes for use in Manufacturing, Catering, Hospitality Education & other Private/Public sectors.

- Heavy duty blue strongweave wiping fabric.
 Biguanide- Free, Alcohol-Free, Taint-Free, Food
 Safe, Antibacterial kill rate of 99.999%
- BPR Article 95 compliant, Outstanding microbial performance against gram positive and gram negative bacteria.
- Tested against E-Coli, P.Aeruginosa, S.Aureus,
 E.Hirae, C.Albicans, Influenza Type A (H1N1),
 Vaccina Virus, BVBV, Mycobacterium Terrae,
 EN1276, EN1650, EN13697, EN14476, DGHM
 Quantitative suspension test.
- 1000x sheets.

POLYETHELENE SPILL CONTAINMENT PRODUCTS > COMPATIBILITY

BY USING THE RIGHT PRODUCTS FOR YOUR **APPLICATIONS YOU WILL:**

- Contain leaking containers.
- Improve safety by storing liquids in define areas.
- Reduce the risk of polluting the ground or water course.
- Provide a cleaner, safer workplace for your staff.

Please Note:

The list below is not exhaustive, it merely represents an extract from the data we hold. If you don't see a listing for your specific liquid please contact us to discuss. The Material Safety Data Sheet for the product is always the best source of this information.

ADVANTAGES OF USING POLYETHYLENE

Polyethylene has many advantages over steel. It normally represents a more cost effective solution, its lighter weight than a comparative steel version and it offers broadband chemical compatibility.

Rotationally moulded from Polyethylene our products are all designed with good housekeeping and compliance with regulations pertaining to the correct storage of liquids. The sumps conform to the 110% of the single largest item or 25% of the combined total of items, whichever is the greater rule and just as importantly they have all been designed with practicality and ease of use in mind.

POLYETHELENE SPILL CONTAINMENT PRODUCTS > SPILL PALLETS

SPILL PALLETS

- Use anywhere you might otherwise have to stand drums directly on the ground.
- Exceptional value for money compared to steel versions.
- Excellent liquid compatibility.

COMPLIANCE

- No taps or drainage points to compromise the bunded area.
- Fully meet the standards set out in the UK oil storage regulations.

PLEASE NOTE:

- Colour option available on 4 drum version to allow you to match existing pallets.
- Spill pallets should only be moved when empty.
- 4 and 8 drum versions available in blue or yellow to match your existing spill pallets.

ALL LIQUIDS CAN CAUSE A PROBLEM IF THEY LEAK, BY STORING THE DRUMS ON SPILL PALLETS THE RISKS ARE GREATLY REDUCED

EMPTERZY 3 YEAR GUARANTEE

POLYETHELENE SPILL CONTAINMENT PRODUCTS> RECYCLED SPILL PALLETS

BP2R - TWO DRUM SPILL PALLET

Rotationally moulded using recycled polyethylene and designed to accommodate 2 x 205ltr drums this spill pallet (only available in black) has a removable plastic grid for easy access to clean the sump and is fitted with fork pockets to help with moving the pallet (we do not advise this is done when laden as the drums could slide off, or if unevenly loaded it could damage the spill pallet).

You will require an appropriate size/capacity fork lift truck to offload this item from the delivery vehicle. Our standard delivery doesn't include any offloading.

BP4LR - FOUR DRUM SPILL PALLET

Rotationally moulded using recycled polyethylene and designed to accommodate 4 x 205ltr drums this low profile spill pallet (only available in black) has a removable plastic grid for easy access to clean the sump and is fitted with fork pockets to help with moving the pallet (we do not advise this is done when laden as the drums could slide off, or if unevenly loaded it could damage the spill pallet).

You will require an appropriate size/capacity fork lift truck to offload this item from the delivery vehicle. Our standard delivery doesn't include any offloading.

A COST EFFECTIVE AND PRACTICAL WAY OF IMPROVING YOUR FACILITIES HOUSEKEEPING

RATED UN OVERPACKS

Our UN approved overpacks (all "X" rated) come in 3 sizes which are available with screw on or lever lock lids making it easy to facilitate the safe storage, handling and transportation of hazardous materials, deal with spill containment and the clean-up of hazardous materials and bio waste disposal and incineration.

Manufactured in yellow blowmoulded high-density polyethylene (HDPE) with UV inhibitors, they are lightweight yet durable and weather and chemical resistant.

COMPLIANCE

An overpack is defined by the UN Model Regulations and means "an enclosure used by a single consignor to contain one or more packages and to form one unit for the convenience of handling and stowage during transport".

The UN regulations enable goods to be transported whilst still meeting each countries different regulations.

PLEASE NOTE: OVERPACK OP1 is not UN approved.

DESIGNED TO ACCOMMODATE DRUMS UP TO 205LTR IN SIZE, THE OVERPACK ALLOWS YOU TO CONTAIN DAMAGED **OR LEAKING DRUMS UNTIL THEY CAN BE DISPOSED OF CORRECTLY**

POLYETHELENE SPILL CONTAINMENT PRODUCTS > SPILL FLOORING

SPILL FLOORING

Backed by a 3 year guarantee and available in blue or yellow with black plastic decks, this range of low profile (150mm high) sump flooring can be used as stand-alone sections or joined together with sump connectors to created fully bunded work areas.

ACCESSORIES

When creating a work area using multiple sections of spill flooring we recommend you use the metal joining strips (BFS2 & BFS4) to secure them together and cover the gap between sections. The 1" BSP threaded sump connector (pack of 2) allows spilt liquid to flow freely between sections utilising all the sump capacity in the event of a large spill. Please discuss your requirements with us prior to ordering accessories.

PLEASE NOTE:: The letter Y after a product code denotes the item is yellow and a B denotes that it is blue. Please double check before placing your order to ensure to receive the right colour product.

IBC SPILL PALLETS

- Two styles available either with or without a built-in dispensing area.
- Suitable for most standard size 1000ltr IBCs.
- Covered version for

economical outdoor storage.
The tray clips onto the top edge of a BB1B spill pallet acting as a dispensing area to catch any leaks or drips. Should the tray become full the liquid flows back into the main sump of the sump pallet.

COMPLIANCE

- All models are fully compliant with all current UK regulations.
- Sumps hold 110% of the capacity of a 1000ltr IBC.
- Spill pallets should only be moved when empty.

FOUR WAY FORKLIFT ENTRY IBCS

Manufactured from medium density polyethylene this heavy duty spill pallet has 4 way fork lift access, broad range chemical compatibility, a removable plastic mesh deck and it fully complies with all the UK regulations relating to sump capacities.

ALTHOUGH REGARDED AS ONE OF THE SAFEST WAYS OF TRANSPORTING LIQUIDS, ACCIDENTS STILL HAPPEN. BY HOUSING YOUR IBC ON A SPILL PALLET YOU REDUCE THE RISK AND ENSURE COMPLIANCE

PLEASE NOTE:: The letter Y after a product code denotes the item is yellow and a B denotes that it is blue. Please double check before placing your order to ensure to receive the right colour product.

COVERED IBC SPILL PALLETS

Designed to give you the flexibility of using an IBC spill pallet outside without the sump filling with rainwater. This IBC spill pallet has a self-assembly steel frame and comes with a polyethylene cover which can be tied in place to keep it open. The sump fully complies with all the UK regulations relating to sump capacities.

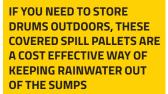

COVERED SPILL PALLETS

If you find that you have to store your drums outside you will need to ensure the sump can't be compromised by rainwater.

We offer 2 loose fit PVC covers for use with 2 and 4 drum spill pallets. BP2 and BP4L and 3 sizes of spill pallet complete with metal frames and covers.

ADVICE

If any liquid (including rainwater) is found in a sump don't be tempted to just assume it's not contaminated or harmful. Please have it tested to determine how it should be disposed of.

PLEASE NOTE:: The letter Y after a product code denotes the item is yellow and a B denotes that it is blue. Please double check before placing your order to ensure to receive the right colour product.

AN EMERGENCY TANK SHOWER FOR USE WHERE A CONSTANT WATER SUPPLY OR ADEQUATE WATER PRESSURE IS UNAVAILABLE.

F

10 Questions...

As a starting point the following questions will generate the information required to help you ensure you store products correctly and safely.

KENONENE OLI

1. What are the liquids?

a provide a second second second

- 2. Is there a fire, explosion or vapour release risk associated with any of the liquids?
- 3. Is there a requirement to store any of the liquids separately?
- 4. How many litres of each product do you want to store?
- 5. Are you looking to bulk store, or use drums & or IBCs?

6. Will the liquid be stored indoors or out?

STCUT 428

(NEW)

(NEW)

- 7. If indoors are there any access issues with regard to the location?
- 8. If outdoors are there surface water drains or a water course in the vicinity?
- 9. How will the liquids be delivered to site?
- 10. How will they be moved around the site?

DRUM & IBC BUNDED STORAGE > STEEL DRUM & IBC STORAGE

The incorrect storage or poor management of liquids can have far reaching consequences for your business and the environment and although all the different UK Oil Storage Regulations are amongst some of the most highly publicised regulation currently in force it's all too easy to forget that all liquids pose a potential threat to health, safety and the environment if not properly handled and stored. Remember you are responsible for all the liquids on your site and you can be prosecuted for a pollution incident that originates on your site even if it was caused by vandals.

The following information will help you determine the correct system to suit your specific requirements and when used in conjunction with other measures including good housekeeping, spill kits and training, will substantially reduce the risk of an incident.

The SDS (Safety Data Sheet) for the liquids you use will provide much of the detail required to answer questions 1, 2 & 3 but you should also talk to the manufacturer for advice on issues such as segregation of liquids, possible explosion risk and vapour release hazards.

Determining the amounts (litres) of product you have on site and in what types of container (205ltr drums, 1000ltr IBC, bulk tanks etc.) is fundamental to ensuring you don't end up with product stored in a way that will lead to an incident. Don't forget to include used, empty containers which are likely to have residues in them and must therefore still be stored correctly too.

You must consider the location of the storage area with great care to minimise the risks of damage to the environment, the health and safety of your employees and the public. It must be located somewhere that if liquids leak or spill, you will not pollute the air, land, surface or ground waters. It goes without saying that your storage containers (bunded stores, spill pallets etc.) must be designed with environmental protection in mind. This means that the bund and any storage units or spill pallets must be able to contain at least 110% of the volume of the largest container or 25% of the total volume stored, whichever is greater and you must check that they are made of a material that is compatible with the liquid you are storing. Don't forget to consider how you protect the drums or IBCs when they are being moved around the site, bunded trolleys or mobile spill pallets are ideal but remember to properly secure the load before setting off.

Don't forget areas where you have smaller amounts of liquids such as laboratories, test rigs, workshops or vehicles. The same rules apply but you may only require a laboratory cabinet (Flammable liquids must be held in a fire-proof steel cabinet) to store the liquids in. Remember to consider segregation issues when storing different liquids together and ensure that the cabinet is secured to the floor and/ or wall to prevent it toppling over, avoid the temptation to store liquids directly on the floor, even on a temporary basis, and always avoid storing above eye-height, or on top of cupboards or cabinets. Wear/use PPE (Personal Protective Equipment) as appropriate at all times.

DRUM & IBC BUNDED STORAGE> STEEL SPILL PALLETS

STEEL SPILL PALLETS

Manufactured from galvanised steel these spill pallets has a fully seam welded sump that is fully compliant with all the UK regulations relating to sump capacities and a removable galvanised steel grid mesh deck is fitted as standard as are the 150mm wide fork hoops, which are used for moving the pallet and keep the underside of the sump off the ground.

ACCESSORIES

- All our steel spill pallets have sump capacities that are fully compliant with current UK regulations. ALL MODELS HAVE REMOVABLE GALVANISED MESH DECKS FOR EASY CLEANING OF THE SUMP

"DON'T LET LEAKING DRUMS CREATE POLLUTION PROBLEMS. STORE THEM SAFELY ON A FULLY CONTAINED SPILL PALLET"

DRUM & IBC BUNDED STORAGE> FULLY ENCLOSED SECURE DRUM STORES

DRUM STORES

We bring more than 30 years expertise to the design and manufacture of bunded storage units. Manufactured in our modern UK factory our comprehensive range of secure bunded storage units is designed for use with both 205ltr drums and 1000ltr IBCs.

Our extensive range of bunded storage units includes fork lift truck access stores for drums/IBCs and easily accessible walk-in stores.

Delivered to site ready for use our bunded storage units provide an immediate solution to the problems encountered in complying with environmental legislation.

Our secure bunded storage units are fully compliant with all the current UK regulations covering oil and chemical storage.

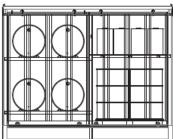

DS16HS allows you to store 16 x 205ltr drums vertically all on one level while DS32R holds 32 x 205ltr drums vertically on two levels and is fitted with roller shutter doors. Please contact us for further details.

DRUM & IBC BUNDED STORAGE> TAILORED SOLUTIONS

TAILORED

- You may think it's complicated but it's not.
- You tell us what you want to store, drums/IBCs of liquid, cylinders of special gasses, hazardous powders, temperature sensitive products, dry goods etc.
- You tell us where you want the store located and how you want to access it.
- We carry out an assessment of the site.
- We provide a report, drawings and of course a quotation and you have the information to make your decision with confidence.

ADDITIONAL INFORMATION

- Typically there is no need for planning permission.
- We don't use sub contractors only our own fully trained staff.
- A schedule of works is agreed at the start of the project.
- All work guaranteed.

WHEN YOU WANT A STORE TO SUIT YOUR PARTICULAR NEEDS, WHETHER THAT BE TO FIT A SPECIFIC SPACE OR A UNIQUE LAYOUT, LOOK NO FURTHER, JUST TELL US WHAT YOU WANT AND WE WILL DESIGN, BUILD AND INSTALL IT FOR YOU

OPTIONS FOR OUR DRUM AND IBC RANGE INCLUDE: LIGHTING, HEATING, AIR CONDITIONING AND FIRE SUPPRESION. ELECTRICAL OPTIONS ARE AVAILABLE IN BOTH COMERCIAL AND ATEX VERSIONS.

DRUM & IBC BUNDED STORAGE > COMPOUNDS

COMPOUNDS

- We offer 3 standard models capable of storing 64 to 96 x 205ltr drums or 16 to 24 x 1000ltr IBCs.
- We can also build them to almost any size or configuration.
- Our roofing system (extruded aluminium frame with double skinned polycarbonate sheets) is designed to maximum natural light and provide a safe working height for fork lift trucks.
- Construction is to a very high specification using 80 x 80mm rolled hollow section steel for the framework and corrugated mild steel infill panels.
- All sumps are fully seam welded and fully compliant with the 25% of the combined total stored rule.

ADDITIONAL INFORMATION

- Standard access is via sliding steel doors but we also offer hinged or roller shutters to suit your requirements.
- Internal storage bays are not normally fitted with doors but if bays require heating temperature control to protect the contents we would advise that they are.
- The space in the centre of a standard compoun is not normally protected by a sump but we can supply one if required by your specification.
- Planning permission should not be required but we would strongly recommend that you confirm this with your local authority before any project is started.

WHEN LOOKING TO STORE LARGE QUANTITES OF DRUMS / IBC OUR COMPOUNDS CAN BE THE COST EFFECTIVE ANSWER COMPARED TO "BRICKS & MORTAR" PLEASE CONTACT US TO DISCUSS YOUR OPTIONS

DRUM & IBC BUNDED STORAGE > WALK-IN STORES

WALK-IN BUNDED STORES

The side and roof panels are manufactured from 0.60mm cold rolled corrugated galvanised steel and for additional strength the unit has a structural frame which is fitted at each end and the centre of the unit. The double doors, fitted with 3 upper and 3 lower vents in each door, are located in one of the "short" sides of the unit and are secured with a Kale mortis lock with cylinder (152 R). Inside the unit is fitted with two sets of shelves (60 kg/shelf distributed load) on each of the "long" side.

The sump is manufactured from 2mm structural grade galvanised steel and is fitted with base plinths to keep the underside out of contact with the ground.

DRY GOODS STORAGE

DRUM & IBC BUNDED STORAGE > FIRE RATED STORAGE

FIRE RATED STORES

When considering the storage of flammable liquids, there are strict adherences concerning separation distances. In simple terms the distance the flammable liquids must be stored from occupied buildings, boundaries, process units, flammable liquid storage tanks and or sources of ignition.

Up to 1000ltr - 2 metres From 1000ltr to 100,000ltr - 4 metres Above 100,000ltr m - 7.5 metres

If you can achieve the relevant distance you can use a standard single skinned, fully bunded storage unit to hold your flammable liquids. If you can't achieve the relevant distance the storage unit needs to be fire rated.

The components; such intumescent seals & vents and the Firebatt insulation panels we use in the manufacture of our fire rated units are certified by the manufacturers and we construct each unit to ensure compliance using fire resistance classes which are the fire resistance of building components

EMPTEEZY 20 YEAR GUARANTEE

and constructions which are classified in different fire resistance classes or combinations thereof. The different fire resistance classes specify different performance criteria and are normally followed by a number, for example 30, 60, 90 or 120 which shows the time the performance criteria fulfilled during a standardized fire test.

R - Load bearing capacity The length of time that the relevant structural element is able to carry the current load in a normal fire development phase.

E - Integrity

The length of time that the structural element retains its integrity against flames or hot gases in a standard fire.

- Insulation

The time it takes to produce an increase in temperature on the cold side of the structural element.

So if a fire rated unit has an REI of 120 it shows that it is classed as a 120 minute (Two hour) fire rated unit.

DRY GOODS STORAGE

DRUM & IBC BUNDED STORAGE > GAS CYLINDER STORAGE

GAS CYLINDER STORES

- We can colour code your unit to suit the gases you are storing. This can be useful when you have numerous gases and need to ensure correct segregation.
- All models are fitted with fork pockets to aid unloading and location on site.
- Our standard finish is Green RAL 6029.
- All models are fitted with retaining straps or chains (not applicable on CT2LP).

CT1

- Mainly for internal use this unit allows you to keep up to 8 large cylinders together.
- Fitted with a handy access ramp that doubles as a security device (can be padlocked) to deter unauthorised movement of individual cylinders.

ENSURING THAT YOUR GASES ARE SAFELY, SECURELY AND CORRECTLY STORED IS AS IMPORTANT AS YOUR LIQUID STORAGE

CT2

- For indoor or outdoor use, this unit is enclosed on three sides and roofed.
- Access is via a drop down loading ramp and hinged steel mesh door.
- The unit is "gapped" around the base and roof to aid ventilation.
- Can hold up to 8 cylinders.

CT2LP

- Built to the same specification as CT2, this unit is fitted with a shelf suitable for smaller cylinders or bottles.
- Can hold up to 12 cylinders bottles.

GB30

- This unit can hold up to 27 cylinders in compartments fitted with securing chains.
- The twin hinged mesh doors allow you to control who has access.
- A detachable steel ramp is included with this model to aid loading and unloading.

DRUM & IBC BUNDED STORAGE> SECURE DRY GOODS STORE

RACKSTOR

- Will hold up to twelve 1m x 800mm pallets or eight 1.2m x 1m pallets.
- Equally spaced beams provide 2.7m space between the uprights.
- Uniform Distributed Load is 2.6 tonne per bay, 10.4 tonne per unit.
- Adjustable racking is bolted to the units frame to provide flexible storage options.
- Large lockable sliding doors for easy access by fork lift truck.
- No planning permission required.
- No special foundations required.

IF YOU HAVE LIMITED INDOOR STORAGE SPACE THIS UNIT CAN PROVIDE THE SOLUTION, ITS SOLID FRAME IS CLAD WITH PLASTISOL AND ACCESS IS CONTROLLED VIA LOCKABLE SLIDING DOORS

FLAMMABLE LIQUID SAFETY

PRODUCTS

SAFETY CAN

It's important not to overlook any aspect associated with the safe handling of flammable liquids. Static discharge during filling/decanting, combustion due to excessive heat build-up, potential ignition source such as a spark from a tool or electrical component and pressure build-up in a container.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > WHAT YOU NEED TO KNOW!

RECOMMENDATIONS

- The H.S.E. recommends that the maximum quantities that are stored in cabinets/bins are no more than 50ltr for extremely flammable, highly flammable and those flammable liquids with a flashpoint below the maximum ambient temperature 30°C of the working area; and no more than 250ltr for other flammable liquids with a higher flashpoint of up to 55°C.
- These quantities are intended to be viewed as recommended maximums and represent good industry safe practice, rather than being taken as the absolute limits.

GUIDANCE

- There can be some flexibility with the limits of the quantities stored, where it is understood that the design of the building and or the pattern of work can sometimes make adherence to these quantities difficult. For example, in large or open-plan working areas. However, where the employer/duty holder does identify a need to store quantities in excess of the recommended maximum, they must fully demonstrate the need for this requirement and in particular the risk assessment should take into account:
- The properties of the materials to be stored or handled (For mixed storage the worst case situation should be applied, i.e. all materials in the storage cabinets or bin should be considered as being as dangerous as the one that has the lowest flashpoint).
- The size of the workroom/working area and the number of people working in it.
- The amount of flammable liquids being handled in the working area and the quantities of liquid that may be accidentally released or spilled.
- Ignition sources and potential fire spread in the event of an ignition.
- Exhaust ventilation provision to the working area and or the storage cabinets or bin.
- The fire performance of the storage cabinet or bin.
- The arrangements for closing the cabinet or bin door/lid in the event of a fire.
- Means of escape from the working area.

OBJECTIVE

- In the event of an incident the objective is to ensure that people can safely escape from the working area and in this context, the purpose of storing Dangerous Substances in the appropriate cabinets/bins is to provide a physical barrier to delay the involvement of the stored materials in a fire and provide sufficient time for people's safe evacuation and the duty holder's immediate emergency procedures supporting this to be implemented.
- It is the responsibility of the employer/duty holder to ensure that cabinets/bins meet the minimum legal requirements. Equally, the use of cabinets/bins with enhanced fire performance should not be seen as a substitute for the provision of a dedicated store room(s) and outdoor storage areas for the safe keeping of containers which are nominally empty or are not needed for current work.

PRODUCTS

 It's important not to overlook any aspect associated with the safe handling of flammable liquids. Static discharge during filling/decanting, combustion due to excessive heat build-up, potential ignition source such as a spark from a tool or electrical component and pressure build-up in a container.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > WHAT YOU NEED TO KNOW!

REGULATION

The safe storage of flammable liquids in process areas, workrooms, laboratories and similar working areas requires careful and informed consideration.

The Dangerous Substances and Explosive Atmospheres Regulations 2002 (DSEAR) require risks from the indoor storage of Dangerous Substances to be controlled by elimination or by reducing the quantities of such substances in the workplace to a minimum and providing mitigation to protect against foreseeable incidents.

FIRE TRIANGLE

There are 3 elements required for a fire to start:

HEAT — **OXYGEN** — **FUEL** If you eliminate any one of these

If you eliminate any one of these elements, you eliminate the fire.

HEAT Can be any ignition source which generates heat, such as a mechanical spark, static electricity, a lit match, cigarette/cigar etc.

Effective control is achieved by the flame arresters and self-closing leak tight lids fitted to all our safety cans.

OXYGEN & FUEL Oxygen is all around us and fuel can be a flammable or combustible liquid.

Both are controlled by leak tight lids fitted with sealing gaskets that ensure fire can't get in and flammable vapours can't get out.

REQUIREMENTS

For practical purposes where flammable liquids are used, there is likely to be a need for a limited quantity to be stored in the working environment. It is the responsibility of the employer/duty holder when carrying out their risk assessment to justify the need to store any particular quantity of flammable liquid within the work room/ working area.

However, the guiding principle is that only the minimum quantity needed for frequently occurring activities or an amount required for use during half a day or one shift should be present in the work room/working area.

Actual quantities will depend on the work activity and also the arrangements for controlling the fire risks.

When not in use, containers of flammable liquids needed for ongoing work activities should be kept closed and stored in suitable fire resistant cabinets or bins which are also designed to retain spills.

They should be located in designated areas that are where possible away from the processing area and so as not to interfere with the escape route from the working area.

The flammable liquids should be stored separately from other dangerous substances that may enhance the risk of fire or compromise the integrity of the container or cabinet/bin it's stored in; for example, oxidizers and corrosive materials should be separated. Remember other dangerous substances may also be flammable in their own right, however, it is still inappropriate to store these in the same cabinet/bin with flammable liquids. Further guidance on energetic and spontaneously combustible substances is contained in HS(G)131 published by the HSE.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > ADVICE ON STORAGE

HAZARDOUS MATERIALS

In support of our standard range of units we are able to offer products that comply with a variety of regulations.

Products range from dual certified EN/FM 30 & 90 minute fire rated cabinets to forklift truck access and walk-in REI90 drum and IBC stores.

ADVICE

- To start the process of helping you select the correct product to suit your situation we will need to know the following; what volume and quantity of product you want to store and the proposed location. We will also need copies of the Material Safety Data Sheets.
- We would normally recommend a visit to site, this carries no onus, cost or obligation on your part.
- We also strongly recommend that you take independent advice from your insurers, local authority fire brigade and the HSE.

DEFINITION OF FLAMMABLE LIQUIDS

- In general terms it is a liquid which has a flash point of 55°C or below.
- The three main categories are flammable, highly flammable and extremely flammable.

FLAMMABLE LIQUIDS

- Liquids with a flash point equal to or greater than 21°C and less than or equal to 55°C, which supports combustion when tested at 55°C.

HIGHLY FLAMMABLE LIQUIDS

Liquids with a flash point lower than 21°C but are not classified as extremely flammable.

EXTREMELY FLAMMABLE LIQUID

Liquids with a flash point lower than 0°C and with a boiling point lower than or equal to 35°C.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > DUAL APPROVED EN/FM FIRE RATED CABINETS

30 MINUTE FIRE RATED UNDER-BENCH & FREE STANDING EN/FM APPROVED CABINETS

Manufactured in the EU to comply with EN and FM standards this cabinet is built in melamine which has good overall chemical compatibility. The exterior is finished with a PVC protection film RAL 7035 grey with RAL 1023 yellow edges and is fitted with safety labelling in accordance with EN 14470-1.

Ventilation is provided by means of 100mmØ air inlet/ air outlet ducts which provide natural ventilation or can be connected to a forced ventilation/filtration system. The ducts are protected by thermos fuse seals that automatically shut the system in the event if a fire. Likewise the door is protected by thermo-expanding seals and is fitted with a non-sparking, lockable three-point latching mechanism.

ADDITIONAL CABINETS INFORMATION

Cabinets 3031E & 3032E come complete with a removable steel containment sump fitted with a perforated steel cover and the self closing door (can be kept open) is fitted with a fusible link, which if the temperature rises above 47°C will break and allow the door to close automatically.

Cabinets 3034E & 3035E have additional 3 steel retention shelves which are adjustable in 32mm increments.

Notes: Ventilation and filtration systems are available to allow you to ventilate or filtrate the fumes coming from inside the cabinet, please contact us to discuss your options. If you intend to locate a cabinet on an upper floor you must consider its weight in terms of getting it up any stairs or in a lift and whether the floor construction can accommodate the weight.

STANDARDS: EN14470-1 - FIRE SAFETY STORAGE CABINETS - SAFETY STORAGE CABINETS FOR FLAMMABLE LIQUIDS & FM 6050 FLAMMABLE (IGNITABLE) LIQUIDS EQUIPMENT.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS> DUAL APPROVED EN/FM FIRE RATED CABINETS

90 MINUTE FIRE RATED UNDER-BENCH & FREE STANDING EN/FM APPROVED CABINETS

Manufactured in the EU to comply with EN and FM standards this cabinet is built using a double wall construction method: Thermal insulation is sandwiched between an outer sheet steel shell and an inner melamine-based wood shell and the exterior is finished in a high quality epoxy coating RAL 9010 white and is fitted with safety labelling in accordance with EN 14470-1.

Ventilation is provided by means of 100mmØ air inlet/ air outlet ducts which provide natural ventilation or can be connected to a forced ventilation/filtration system. The ducts are protected by thermos fuse seals that automatically shut the system in the event if a fire. Likewise the door is protected by thermo-expanding seals and is fitted with a cylinder locks.

ADDITIONAL CABINETS INFORMATION

Cabinets 792T & 792E come complete with a removable containment sump and an earthing link, the self closing door (can be kept open) is fitted with a fusible link, which if the temperature rises above 47°C will break and allow the door to close automatically.

Cabinets 794EE & 795E have additional 3 containment shelves

Notes: Ventilation and filtration systems are available to allow you to ventilate or filtrate the fumes coming from inside the cabinet, please contact us to discuss your options.

If you intend to locate a cabinet on an upper floor you must consider its weight in terms of getting it up any stairs or in a lift and whether the floor construction can accommodate the weight.

TYPE I STEEL CANS

- Designed with a single spout for filling and pouring.
- Cans up to 1ltr size have a trigger release handle.
- 4ltr and bigger cans have a swinging handle for easier carrying.
- Factory Mutual approved.

TYPE I POLYETHYLENE CANS

- Where compatibility with steel is an issue.
- Resistant to tough acids and corrosives as well as heat.
- Self close lid, pressure relief mechanism and duel density flame arrester.
- Factory Mutual approved.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS TYPE II STEEL SAFETY CANS

PE II ACCUFLOW™ CANS

- Patented, innovative manifold _ automatically vents for smooth, glug free pouring.
- Safe-Squeeze® trigger provides maximum control when pouring.
- Stainless steel flame arrester dissipates heat to prevent flashback ignition.

ERGONOMIC LIFT LEVER OPENS THE SELF-CLOSE SPOUT FOR EASY **FILLING. A FULL LENGTH STAINLESS STEEL FLAME ARRESTER DISSIPATES HEAT AND ALLOWS DEEPER, SECURE INSERTION OF THE NOZZLE** WHEN FILLING

ADDITIONAL **NFORMATION**

- All Type II cans are Factory Mutual approved.

THESE CANS WILL NOT EXPLODE UNDER FIRE CONDITIONS

YPE II ACCUFLOW™ SAFETY CAN

Air displacement vent for smooth liquid flow.

Auto vents to prevent rupture or explosion.

Leakproof, self closing lid controls vapours and spills.

10 year warranty.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS> WASTE CANS

12765

SELF-CLOSING CANS FOR CORROSIVES

 Manufactured from high-density "natural" polyethylene specifically developed to resist acids and caustics, the flame arrester free spout allows quick pouring of nonflammable corrosives. Translucent material allows you to see the liquid level in the container.

LIQUID DISPOSAL CANS

- Designed for the safe collection of combustible solvents these cans have built-in flame arresters, wide openings to aid filling and automatic venting.

THESE CONTAINERS ARE DESIGNED WITH WIDE APERTURES TO ALLOW THE SAFE COLLECTION OF WASTE LIQUIDS

PRODUCTS; 12161, 12762, 12260 & 12765 ARE NOT FITTED WITH A FLAME ARRESTER.

*Not fitted with a flame arrester.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > BENCH CANS & DISPENSING BOTTLES

DISPENSING BOTTLES

Apply liquid directly on to the surface of the component in a controlled manor with a

BENCH CANS

- These products can be used to either moisten cloths or "wash" small components.
- The mesh screen also acts as a flame arrester, while the hinged lid helps reduce evaporation.

ADDITIONAL INFORMATION

- Flame arresters are designed to prevent in the event of fire, flame from entering the can and causing it to explode.
- All products apart from 14002 and 11171 are Factory Mutual tested and approved.

THE USE OF CLEANING SOLVENTS TO CLEAN COMPONENTS CAN LEAD TO INCIDENTS WHERE RELATIVELY LARGE AMOUNTS OF LIQUID ARE SPILLED. THESE LIQUID DISPENSING SYSTEMS ALLOW YOU TO HAVE FULL CONTROL OVER THE AMOUNT OF LIQUID USED

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > PLUNGER CANS

PLUNGER CANS

- Made from chemically resistant Ryton® and brass, the new Blacktop "smart pump" is designed to drain the contents down to the last few ml so it needs refilling less often.
- A simple and effective way to moisten cleaning cloths and ensure the liquid is fully under your control.
- Place a cloth onto the perforated screen (which also acts as a flame arrester) depress the plunger and a controlled amount of liquid is released.

THE USE OF CLEANING SOLVENTS TO CLEAN COMPONENTS CAN LEAD TO INCIDENTS WHERE RELATIVELY LARGE AMOUNTS OF LIQUID ARE SPILLED. THESE LIQUID DISPENSING SYSTEMS ALLOW YOU TO HAVE FULL **CONTROL OVER THE AMOUNT OF LIQUID USED**

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > DIP & FLOOR STANDING RINSE TANKS

DIP TANKS

The simple solution to soaking "parts". These tanks are fitted with spring loaded stay-open lids with a fusible link which in the event of a fire, melts at 74°C and slams the lid shut, extinguishing the burning contents.

RINSE TANKS

Features a self-close cover _ that is a foot treadle operated to allow both hands to be free.

ADDITIONAL **NFORMATION**

Both types of tank are Factory Mutual approved and tested.

SOME CONTAMINATED COMPONENTS REQUIRE SOAKING/WASHING IN ORDER TO CLEAN THEM AND THIS CAN INVOLVE THE USE OF LARGE AMOUNTS OF FLAMMABLE LIQUIDS, WHICH CAN POSE **A RISK OF FIRE AND/OR PERSONNEL INJURY**

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > SAFETY DRUM TAPS

TO AID YOU IN GETTING LIQUID FROM ITS MAIN CONTAINER INTO A SMALLER ONE FOR DAILY USE, THESE TAPS HAVE SAFETY AS THE PRIME FEATURE

FAPS

- These safety taps incorporate an internal flame arrester which prevents flashback of fire into the drum.
- Brass construction with a (PTFE) polytetrafluoroethylene seal assures a leak proof operation.
- The adjustable versions screw tightly into the drum and can then be adjusted to the dispensing position required with the spout downwards without damaging the thread or leakage.
- For trouble free dispensing of viscous non corrosive flammables such as adhesives, paint or heavy oils above 30w, use the viscous gate valve model 08552.

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > DRUM VENTS & ANTI STATIC WIRES

*These models must be installed in a vertical position

SAFETY DRUM VENTS

- These Factory Mutual approved vents have an operating valve that opens at 0.35 bar internal pressure in normal service for automatic pressure relief.
- Vacuum relief is either manual or automatic dependent on the model and permits 15ltr or more per minute to flow through a standard 19mm tap. All the vents have a flame arrester for added safety as standard.

ANTI STATIC WIRES

 Reduce the risk of fire from static electricity generated by the movement and flow of flammable liquids. By bonding between containers during liquid transfer and connecting drums to an earth you will greatly reduce the risk of a fire.

PRESSURE BUILD-UP AND STATIC DISCHARGE CAN POSE A SERIOUS HAZARD TO STAFF OR EMERGENCY SERVICE PERSONNEL. THESE PRODUCTS ARE DESIGNED TO STOP THIS FROM HAPPENING

HAZARDOUS MATERIAL/

HAZARDOUS & FLAMMABLE LIQUID SAFETY PRODUCTS > DRUM COVERS AND LOCKS

DRUM LOCKS

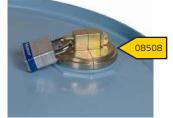

- A simple but extremely effective way to secure and control access to expensive liquids. The lock is made from corrosion resistant, nonsparking die cast zinc. To secure the drum lock it is not necessary to remove the original bung, therefore there is no contact with the drum contents. This elimination of potential content contamination has applications across many industries, including chemical and food processing.
- Installs in seconds, simply place both halves around the bung lip, slide the lock bar through the halves and then attach a padlock (not supplied) through the end hole of the bar.
- The steel set includes two units, one to fit over the 2" NPT plug and the other to fit over the ³/₄" NPT plug.
- The plastic set includes two units which fit over both 2" plugs.
- 7.14mmØ shackle, typical of a No. 3 Master Lock.

DRUM COVERS

- You only need a spanner and a screwdriver to convert a standard 205ltr steel drum into a fire safe bin. The cover is constructed from steel with a highly chemical resistant powder coat paint finish which is tough and durable. The replaceable fusible-link assembly melts at 74°C to automatically slam the lid shut in the event of a fire in the drum, extinguishing the flames
- The VaporTrap™ cover also converts a standard 205ltr steel drum but has a gasket to seal in vapour. There is a 121mm spring loaded, self closing port on the top of the lid so you don't have to open the full lid each time for maximum vapour retention. The manual latching cover vents to relieve pressure build-up and it also accepts a padlock (not supplied) for added security.
- Note: Drum not included.

EMERGENCY SHOWERS

ANSI STANDARD

The ANSI Z358.1 2014 standard establishes universal minimum performance and use requirements for emergency eyewash & drench shower equipment used for the treatment of the eyes, face, and/or body of a person who has been exposed to hazardous materials and/or chemicals. The standard, first implemented in 1981 was modified in 1990, 1998, 2004, 2009 & 2014.

🔔 DID YOU KNOW?

THE HEALTH & SAFETY (FIRST AID) REGULATIONS 1981 AND THE CONTROL OF SUBSTANCES HAZARDOUS TO HEALTH (COSHH) REGULATIONS 1996 REQUIRE;

THAT EMERGENCY SAFETY SHOWERS AND/OR EYE/FACE WASH SYSTEMS ARE PROVIDED WHEREVER EMPLOYEES MAY BE EXPOSED TO CHEMICAL/BURN INJURIES.

DECONTAMINATION EQUIPMENT> ANSI Z358. 1 2014 KEY POINTS

CHOOSING, INSTALLING AND MAINTAINING YOUR EMERGENCY SAFETY SHOWER EQUIPMENT CORRECTLY

When researching new equipment prior to a purchase you may have noticed that there always seems to be a comprehensive choice available and that most of the products appear to follow a similar design to one another, and like a lot of purchase decisions it's the related information that you need to understand before you make the purchase that is just as important as the product and its performance.

Plumbed in emergency safety showers and eye wash basins are no exception, with an array of product choice out there and a real need to gather and interpret related information of paramount importance, the following is a guide to the important information you really should consider so that you choose, install and maintain your emergency safety shower and or eye wash basin correctly at the first time of asking.

Equipment Location: All emergency stations must be located in areas that are accessible within 10 seconds, roughly 17m; this is referred to by the industry as the "10 second rule".

Best practice is to check the travel time to determine if you have the emergency station located within 10 seconds, keeping in mind that an injured person may require extra time/ support to reach the designated station. Where highly corrosive chemicals are used, thought should be given to installing the emergency station as close as possible to the potential hazard. Remember to check the routing of any electrical supply which might then be within the contamination zone.

Obstructions: Emergency stations must be located on the same level as the hazard and the pathway between them must be clear of any obstruction. If your site has a hazard that is located on a different level to your current emergency station, you will have to install an additional station on the same level as the hazard. Again there must be no obstructions between them. Please note that a door is classed as an obstruction, but if the hazard is non-corrosive, one door is acceptable between the hazard and the emergency station so long as it opens in the direction of travel of the person requiring its use.

Water supply: Always connect to a potable water supply and consider draining the water supply and fitting a filter prior to connecting the emergency equipment to it a. To comply with the ANSI Z358.1 standards, tepid water $(16^{\circ}C - 38^{\circ}C)$ should be provided.

Recommended incoming pipe sizes are:

- ½" for eyewash stations and eye/face wash stations
- 1" for drench showers
- 1¼" for combination eyewash drench showers

Water Temperature & Tepid Water: Tepid water is crucial, but often overlooked when providing emergency shower and eye wash equipment. Medical professionals recommend that tepid water is used to treat chemically injuries to eyes and body tissue because temperatures that exceed 38°C can enhance chemical interaction with the eyes and skin. Additionally, flushing liquid temperatures below 16°C can cause hypothermic shock and while cooler flushing fluids may provide immediate relief after chemical contact, prolonged exposure to cold fluids affect the ability to maintain adequate body temperature and can result in the premature cessation of first aid treatment.

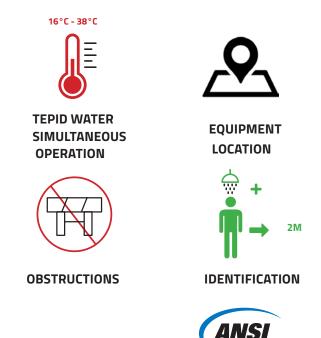

If you are providing tepid water you must install a hot water shut-off to prevent accidental scalding, and a cold water bypass to ensure the delivery of flushing liquids in the event that the hot water supply fails. Most facilities located in the UK have outside temperatures that can drop to below 0°C during the winter, therefore emergency safety shower and or eye wash equipment that can be exposed to freezing temperatures need protection to ensure their continued availability for use. Conversely locations where the ambient water temperature can exceed 37°C will require anti-scald valves to purge potentially scalding water from the feed lines. This will include outdoor locations that are exposed to direct sunlight, or indoor locations exposed to extremes of temperature created by a manufacturing process.

Shut-Off Valves: If shut-off valves are installed on the water supply line for maintenance purposes, provisions must be made to prevent an unauthorised shut-off to ensure valves are always open.

Signs: Each unit installed must be identified with the appropriate safety sign to help identify the area and the emergency equipment located in it.

Operation: In the event of an accident, the injured person should shower or wash their eyes IMMEDIATELY for 15 minutes. All equipment should be fitted with stay open valves so the water supply will continue without the requirement to keep hold of the activation device.

A qualified first aider or doctor should be in attendance as soon as possible and if appropriate the injured person should be taken to hospital for further treatment.

American National Standards Institute

Training: All employees who may be exposed to hazardous or corrosive materials must know the locations of, and be instructed in the proper use of the eyewash and/or drench shower equipment on site; in addition, site plans showing the exact locations of all emergency stations should be freely available to anyone entering the site.

Maintenance & Testing: Planned maintenance is necessary to ensure that all emergency equipment is functioning safely and correctly. Weekly testing will ensure the supply lines are clear of sediment and bacteria build-up that can occur in stagnant water and also allows you to verify the equipment's operation and ensure that flushing fluid is available.

Record keeping: The HSE consider equipment like this to be lifesaving equipment, so by carrying out regular checks and servicing you will help satisfy any HSE inspection and show that the equipment is being well maintained. Remember to keep a record of all maintenance activity, detailing any repairs undertaken including all activations.

COSHH regulations require that safety equipment is "maintained in an efficient state, in efficient working order and in good repair" and that records are kept for a period of at least 5 years to prove the inspections and maintenance work has been carried out.

PUWER (Provision & Use of Work Equipment Regulations 1998) requires that where inspections are carried out they should be undertaken by a competent person and a record kept until the next inspection.

Waste Disposal: Proper disposal of the contaminated water must be considered when installing new equipment and drainage, freezing temperatures and pollutants should be considered too. We recommend that you consult your Local Authority, Water provider or Environment Agency for additional guidance on the correct wastewater disposal method for your site.

We hope you find this information useful and if you would like assistance with choosing the right emergency safety shower equipment for your facility please do not hesitate to contact us and we can arrange for one of our experienced managers to visit and carryout a confidential, without onus and free of charge assessment with you.

DECONTAMINATED EQUIPMENT > EMERGENCY TANK SHOWERS

VERTICAL TANK SHOWERS E-VTS-1 & SE-VTS-2

Our emergency tank showers are designed for locations that don't have access to a potable water supply or the location suffers from low water pressure rendering a plumbed in version inadequate. Model SE-VTS-1, our 2000ltr independently tested and certified version, provides 15 minutes continuous flow of tepid water in line with ANSI Z358.1.

Instead of simply going through a process of self-certification, Empteezy went the extra mile and elected to have its tepid water emergency tank shower SE-VTS-1 undergo independent tests to prove its compliance to international standards.

Firstly we worked with IAPMO R&T, North America's premium plumbing and mechanical product certification agency to demonstrate that the SE-VTS-1 tank shower, which distributes 75.7 litres of tepid water per minute over 15 minutes met with ANSI standard Z358.1-2014 for the US market and in addition also had the product tested to the same standard by Applus+ Laboratories, one of Europe's top test & certification organisations.

Applus+ Laboratories tested the emergency tank shower to verify its compliance with the European Norm; UNE-EN 15154-3: 2010 Safety Showers - Part 3: Body Showers Not Connected to the Water Supply & UNE-EN 15154-4: 2010 Safety Showers - Part 4: Eyewash Units Not Connected to the Water Supply. The tank shower passed the test with flying colours.

STANDARD SPECIFICATION FOR **BOTH MODELS:**

- 40mm x 40mm x 3mm hot dip galvanised (provides corrosion protection) carbon steel, square tubular frame with bolt down fixing brackets.
- Rotationally moulded polyethylene water tank (2000ltr or 1250ltr).
- 40mm reflective Kingspan Thermapitch® TP10 rigid polyurethane foam, insulation board (0.022Wm.k thermal conductivity).
- GRP tank shroud complete with warning signage.
- 3Kw heating element (sits in a sump to ensure it is covered even when the tank is empty).
- Activation & test handle (you don't get wet when testing or assisting someone).
- Stainless steel shower head.
- Swing arm water level gauge.

THE COMPREHENSIVE RANGE OF OPTIONS FOR BOTH MODELS INCLUDES:

- Stainless steel frame.
- Galvanised or stainless steel waste water collection sump with galvanised or stainless steel grid mesh.
- GRP main shower activation foot treadle.
- Self-drain eyewash bull horns.
- Self-drain yewash basin, plastic or stainless steel.
- GRP eyewash activation foot treadle.
- Modesty/spray containment panels (2 sides & back).
- Digital water level/water temperature display.
- Audible/visual alarm to denote activation of the shower.
- Audible/visual alarm for temperature/water level.
- 6Kw heater for areas where the ambient is below freezing.
- Water chiller for areas where the ambient could result in scolding water.
- Standard commercial electrics.
- ATEX zoned electrics.

AN EMERGENCY TANK SHOWER FOR USE WHERE A CONSTANT WATER SUPPLY OR ADEQUATE WATER PRESSURE IS UNAVAILABLE

DECONTAMINATED EQUIPMENT> WRAP AROUND EMERGENCY SAFETY SHOWER

WAES

A rotationally moulded polyethylene wrap-around water tank and pipework encased in a one piece GRP shroud with access panels for pump, pipework & electrical controls. This emergency safety shower is fitted with galvanised grid mesh treadle, which when walked on activates the shower and is semi enclosed and fully compliant with ANSI Z358.1. An electric pump maintains the flow rate and used water can be pumped straight to a waste water hold tank ready for disposal.

OPTIONS INCLUDE

- GRP roof and one piece shroud can be supplied in a range of colours.
- Eyewash basin.
- Galvanised or stainless steel collection sump complete with ramp.
- Stainless steel grid mesh & activator.
- Chiller unit.
- Solar Panels/Inverter/battery system.
- Digital display for water temperature and level.
- Alarm system for water temperature and level.
- Remote Alarm system to BMS via volt free signal.
- 110v equipment (Standard is 230v).

Size: 1.87m L x 1.57m D x 2.77m H (to top of curved roof) Shower flow rate: from 75.7ltr per min Eyewash flow rate: from 1.5ltr per min

ENDOSAN5™ WATER TREATMENT CHEMICAL

EndoSan™ 5 is an independently tested highly effective bactericide, virucide, sporicide, fungicide, algaecide and amoebicide and is both chlorine and alcohol free and non-corrosive to any material during application. This is an environmentally responsible way to dose the water in your portable Eye wash or Tank shower as it degrades into harmless water and oxygen, is odourless, colourless and tasteless.

Key Benefits:

- PH neutral

- Two year shelf life
- Powerful whilst being non-toxic - Creates no harmful bi-products
- Versatile and easy to use
- Odourless, colourless & tasteless
- Highly effective biofilm remover
- Effective at a wide range of
- temperatures.

When dosing, the parts per million ratio for EndoSan™ 5 is 50

ENDOSAN5™ TEST STRIPS

EndoSan™ test strips measure the Hydrogen Peroxide levels in the water in parts per million (0 - 100ppm). These are a useful indicator of the levels of biocide in the tank or system.

FOR ENDOSAN5™ PRODUCTS THE PPM RATIO IS 50, PLEASE SEE THE ENDOSAN - METHOD STATEMENT AND RISK ASSESSMENTS FORM FOR FULL DETAILS, THIS CAN BE FOUND ON OUR WEBSITE

STEEL Chemstor® Storage Solutions

COMBINATION SHOWER - SELF DRAIN PLATFORM SHOWER -CPSE

Manufactured using galvanised pipe work which is protected with an anti-corrosive Polyamide 11 high visibility yellow plastic coating to give good resistance to acids, bases, seawater and oils, all fittings are brass and the 250mmØ shower head and eyewash bowl are manufactured from ABS reinforced plastic. The eyewash has two high flow, aerated low pressure outlets fitted with automatic opening dust covers.

This combination safety shower and eyewash is fitted with an automatic drain system to remove residual water after use and has been designed to meet and exceed the internationally recognised standards: EN15154 parts 1 & 2, DIN12899.3 and ANSI Z358.1.

COMBINATION SHOWER - ABS PLASTIC SHOWER HEAD & BASIN - FSCS

This treadle plate is designed for use with the combination shower FSCS. Simple to install and use the foot treadle provides hands free activation of the shower unit.

Manufactured from steel the treadle which is protected with an anti-corrosive polyamide 11 high visibility yellow plastic coating to give good resistance to acids, bases, seawater and oils.

This treadle plate is designed for use with the combination shower FSCS. Simple to install and use the foot treadle provides hands free activation of the shower unit.

Manufactured from steel the treadle which is protected with an anti-corrosive polyamide 11 high visibility yellow plastic coating to give good resistance to acids, bases, seawater and oils.

HTS 1 - HEAT TRACE SAFETY SHOWER

The HTS-1 is a traced heat (commercial electrics) decontamination shower that is protected against freezing by means of trace heat cabling and an insulated jacket which gives protection down to -25°C. The water supply is via a bottom feed supply and the shower head is activated by high visibility yellow pull handle which opens the "stay-open" valve, which means that the shower will continue to operate until the valve is closed by pushing the handle back into the "up" position.

Optional extras include:

- Bullhorn eye wash.
- Galvanised or stainless steel waste water collection sumps.
- Galvanised or stainless steel cubicles with collections sumps.
- Commercial electrics PIR lighting.
- Commercial electrics Alarm/sounder with proximity switch.
- ATEX Zone 1 Lighting.
- ATEX Trace heating.
- ATEX Zone 1 Alarm/sounder with proximity switch.

Suitable anchors must be used to ensure that the unit is rigid and properly secured before being used. If desired or required, additional straps or braces can be used to secure any unit. (BE SURE NOT TO DRILL OR SCREW ANYTHING INTO THE OUTER PLASTIC SHELL).

HEAT TRACE: 220 volts @ 20 watts per metre; self regulating.

You will require an appropriate size/capacity fork lift truck to offload this item from the delivery vehicle. Our standard delivery doesn't include any offloading.

EDS - DECONTAMINATION SHOWER 14 NOZZLE SELF-DRAIN

Manufactured using galvanised pipe work which is protected with an anti-corrosive Polyamide 11 high visibility yellow plastic coating to give good resistance to acids, bases, seawater and oils. The decontamination shower is fitted with 14 spray heads to provide full body coverage and activation occurs as soon as the treadle plate is stepped on.

This decontamination shower is fitted with an automatic drain system to remove residual water after use and has been designed to meet and exceed the internationally recognised standards: EN15154 parts 1 & 2, DIN12899.3 and ANSI Z358.1.

EMERGENCY SHOWERS> PEDESTAL MOUNTED EYEWASH

PEDESTAL MOUNTED EMERGENCY EYEWASH ABS (PLASTIC) - PMEW

The galvanised steel pipe work and brass fittings are protected with an anti corrosive Polyamide 11 high visibility yellow plastic coating which provides good resistance to acids, bases, seawater and oils.

The eyewash assembly and eyewash bowl are manufactured from ABS reinforced plastic and the bowl is fitted with two high flow, aerated low pressure outlets fitted with automatic opening dust covers.

This pedestal mounted eyewash has been designed to meet and exceed the internationally recognised standards: EN15154 parts 1 & 2, DIN12899.3 and ANSI Z358.1.

PEDESTAL MOUNTED EMERGENCY EYEWASH (STAINLESS STEEL) - PMEW-SS

All the pipe work and fittings are manufactured from stainless steel as are the eyewash assembly and eyewash bowl. The bowl is fitted with two high flow aerated low pressure outlets fitted with automatic opening dust covers.

This pedestal mounted eyewash has been designed to meet and exceed the internationally recognised standards: EN15154 parts 1 & 2, DIN12899.3 and ANSI Z358.1.

PEDESTAL MOUNTED EMERGENCY EYEWASH (DUAL CONTROL) -PMEW-DC

The galvanised steel pipe work and brass fittings are protected with an anticorrosive polyamide 11 high visibility yellow plastic coating which provides good resistance to acids, bases, seawater and oils.

The eyewash assembly and eyewash bowl are manufactured from ABS reinforced plastic and the bowl is fitted with two high flow, aerated low pressure outlets fitted with automatic opening dust covers.

Activation of this eyewash is by means of either pushing the hand paddle or standing on the foot treadle.

This pedestal mounted dual control eyewash has been designed to meet and exceed the internationally recognised standards: EN15154 parts 1 & 2, DIN12899.3 and ANSI Z358.1.

EMERGENCY SHOWERS > ACCESSORIES

REEN

A simple 3 sided structure designed to help contain the water from the shower and/or afford some modestly to the user. The screen will also provide some protection from the wind and help reduce any thermal shock.

STC

This simple device stops the operator from getting soaked when carrying out weekly test activations of the shower. Manufactured from plasticized PVC the curtain simply "gathers" at the top of the shower and contains the water, directing it to the floor.

We offer commercial and ATEX rated alarm systems (audible & visual), please contact us to discuss your specific requirements.

NOTE:

All three connectors are protected with an anti-corrosive Polyamide 11 high visibility yellow plastic coating which provides good resistance to acids, bases, seawater and oils.

FPV or anti scald valve ASV to

connect to the 11/4" inlet.

Contract of the

ANSI TIP - ANSI Z358.1 requires that shower valves be of simple operation, turn from "off" to "on" in one second or less, and provide hands- free operation once activated. Self-closing shower valves do not meet the standard and should be replaced.

use when connecting the freeze protection valve FPV or anti scald valve ASV to an eyewash basin.

use when connecting the freeze protection valve FPV or anti scald valve ASV to an eyewash basin.

ANSI TIP- During the winter months, most facilities will encounter outside temperatures that are below 0°C and therefore emergency showers & eye/face wash stations need to be protected to ensure they will operate. ANSI Z358.1 states that "Where the possibility of freezing temperatures exists, equipment shall be protected from freezing or freeze protected equipment shall be installed" CONN-3.

SAK -ALARM SYSTEM

This standard alarm system has an ABS plastic enclosure that contains all the controls and protection necessary for the alarm to operate. In addition to a local sounder/strobe there is also a volt free contact for remote monitoring. We offer other remote signalling options such as digital or analogue, wireless or hard wired, please contact us to discuss your specific requirements.

When either the main shower valve or the eyebath valve are activated the flow switch detects the water flow and sends a low voltage signal to the control enclosure, this signal switches on a relay and activates the sounder/strobe.

The alarm sounder automatically switches off after 30 minutes but the strobe will continue to flash and the remote signal will remain 'ON' until the alarm condition is removed.

The alarm enclosure will be fitted to an appropriate plate depending on whether it is a shower or eyewash installation.

SPECIFICATION

The alarm system consists of a 20A rotary isolator.

Can and the set

A flow switch fitted to the water supply pipe.

The system operates from a 230 volt single phase 6 amp supply.

A volt free output (n/o n/c c/o) contact is available on terminal 700 & 701 of the terminal bar.

All sensors and external switching is achieved by way of the 24 volt dc PSU fitted to the controls and all electrical equipment is to a minimum IP 54.

The flow switch is a paddle type with a 1" BSP brass fitting suitable for potable water.

THE HEALTH AND SAFETY (FIRST-AID) REGULATIONS 1981 AND THE CONTROL OF SUBSTANCES HAZARDOUS TO HEALTH (COSHH) REGULATIONS 1996 REQUIRE THAT EMERGENCY SAFETY SHOWERS AND/OR EYE/FACE WASH SYSTEMS ARE PROVIDED WHEREVER EMPLOYEES MAY BE EXPOSED TO CHEMICAL/BURN INJURIES.

EMERGENCY SHOWERS

> SPEAKMAN® PORTABLE TANKS

Date of the law of the

PORTABLE EYE/ FACE WASH SYSTEMS

SE-4320 is a 76ltr capacity gravity operated eyewash with side fitted drench hose. Comes complete with a bracket to allow wall mounting. Ideal for areas without plumbed water just fill with tap water and add SE-4210 water preservative to treat for 180 days.

SE-590 is a 38ltr stainless steel vessel complete with pressure gauge, relief valve and an air connector for charging.

Water is delivered from either the twin spray heads for the eyes and face or the drench hose attachment.

Flow rate is nearly constant as the unit empties.

See our EndoSan Water treatment on page 123.

ALL MODELS MEET THE AMERICAN NATIONAL STANDARD ANSI Z 358.1 WHICH IS AN INTERNATIONALLY RECOGNISED STANDARD COVERING THE DESIGN PARAMETERS FOR EMERGENCY SAFETY SHOWERS AND EYE/FACE WASH FOUNTAINS.

WALL MOUNTED SHOWERS

EMERGENCY SHOWERS

Both the showers shown on this page are merely examples from a comprehensive range we have available.

SE-227 has a plastic 203mmø shower head.

SE-227-SS has a stainless steel 203mmø shower head.

Both are activated via a 900 stay open valve by pulling on the large triangular handle.

ADDITIONAL INFORMATION

The last thing someone who is already in shock and may be feeling the effect of the liquid spilled on him/ her wants are painful jets of water hitting them. The impeller action that these showers have turns the water into a swirling motion which means that the flow of the water is softer when it hits the body, it also provides complete body cover for efficient decontamination.

The full specifications for all models are available upon request.

ACCESSION OF A

SE-580 EYE WASH BOWL

Activation of the chrome plated, brass "stayopen" ball valve is via a stainless steel push handle, whilst water delivery to the eye wash bowl is from twin aerated outlets with protective caps and balance control. Flow rate is 13.25ltr per minute.

Bowl size: 282mm x 282mm x 76mm Supply: ½" NPTF Valve: ½" NPTF chrome-plated brass Bowl: Wall mounted round yellow plastic 279mmØ.

SE-1000 EYE/FACE WASH BOWL

Independent eye wash and face wash systems integrated into one, multi-functioning safety unit. The yellow ABS plastic bowl is fitted with aerated sprays for eyewash comfort and innovative face pads for full face cleansing.

Water flow is activated by a large stainless steel "push" handle with a stay-open valve for hands free operation and the bowl is designed to allow it to be installed for wheelchair accessibility.

NOTE:

This unit should be connected to an uninterrupted supply of potable water, with a minimum flowing pressure of 30psi and a maximum static pressure of 125psi.

Flow pressure: 30psi (2.07bar) Flow rate: 18.5lpm

SE-1050 EYE/FACE WASH BOWL

Independent eye wash and face wash systems integrated into one, multi-functioning safety unit. The stainless steel bowl is fitted with aerated sprays for eyewash comfort and innovative face pads for full face cleansing.

Water flow is activated by a large stainless steel "push" handle with a stay-open valve for hands free operation and the bowl is designed to allow it to be installed for wheelchair accessibility.

NOTE:

This unit should be connected to an uninterrupted supply of potable water, with a minimum flowing pressure of 30psi and a maximum static pressure of 125psi.

Flow pressure: 30psi (2.07bar) Flow rate: 18.5lpm.

SPEAKMAN®

AERATED WATER CLINGS TO EYES AND SKIN, WHILE ORDINARY SPRAYED WATER TENDS TO BOUNCE OFF. AERATION IS ESPECIALLY IMPORTANT AS THE HUMAN FACE IS FULL OF CONTOURS AROUND THE EYES, FACE AND NOSE. AERATED WATER REDUCES THE RISK OF HARMFUL CONTAMINANTS BEING FORCED INTO CUTS OR SOFT MUCOUS MEMBRANES. FULL TECHNICAL SPECIFICATIONS ARE AVAILABLE UPON REQUEST.

LABORATORY HANDHELD EYE WASH & DRENCH HOSES

SE-920 is a simple hand held hose that delivers aerated water from a single outlet which is activated by a simple squeeze handle, it also has an integral hanger for storing it.

SE-921 and SE-927 are designed for mounting onto benches up to 164mm thick. The "pull out" flexible hoses make them practical and easy to use. Both models provide aerated water outlets.

ADDITIONAL

Where the eyes, face and/or body of a person may be exposed to chemicals or fine particles or dust, it is recommended that you should make provision for facilities to aid rapid flushing and/or drenching to minimise the risk of permanent injury.

Before you site any equipment you should consider the following; make sure there is easy unhindered access at all times, consider the environment, ambient temperature and of course water pressure and once you have installed the equipment mark it on your site plan, make all staff aware of where it is and how to use it. Provide highly visible signage and ensure all equipment is regularly operated, checked and maintained.

Quotations containing a full specification are available upon request.

Additonal wallmounted bracket WMB available, contact us for more details.

BUNDED PLASTIC

STORING OIL

TAN

Oil is among the most common pollutants in the UK and cleaning up oil spills can be difficult and expensive. Dealing with a spill will cause you a great deal of inconvenience and expense so make sure you have insurance cover, not just to replace the lost oil but to include:

- Environmental clean-up for accidental oil loss.
- A high enough liability limit to cover you if neighbouring land and/or boreholes are affected.
- The costs of cleaning up oil on your own property.

In England and Wales, it is against the law to cause water pollution and there are specific regulations that may apply to your oil storage tank. Non compliance with these regulations is an offence and may result in enforcement action being taken against you. For detailed information go to www.netregs.gov.uk or www.sepa.org.uk

BEFORE YOU BUY

You should think about environmental and fire protection, access, maintenance and security requirements before deciding where to put a new or replacement oil storage tank.

Avoid high risk areas such as:

- Within 50 metres of a spring, well or borehole.
- Within 10 metres of a watercourse.
- Places where spilt oil could enter open drains, loose fitting manhole covers or soak into the ground where it could pollute groundwater.
- Places where a spill could run over hard ground to enter a watercourse or soak into the ground where it could pollute groundwater.
- Places where tank vent pipe outlets can't be seen from the filling point.
- Above roof level as spilt oil can run down guttering which is connected to surface water systems.

ACCESS

You should consider access for maintenance and deliveries to the tank (filling). Check with your delivery company before making the final decision on where to place a tank. You need to take into account pollution prevention and health and safety aspects of filling the tank, this includes where the tanker can safely park to make the delivery, where the delivery pipes will run and access to the tank.

REMINDERS

Before choosing a new or replacement tank, you should check the following: -

- What if any, legal requirements you must comply with Suitability of the tank to your requirements.
- Do you need to install any secondary containment.
- Do you need to install crash barrier protection.
- The location of the tank.
- If you're replacing a tank, what will you do with the old one.

Choose a tank that:

- Is expected to last at least 20 years, with proper maintenance, before it needs to be replaced.
- Is made of a material that is suitable for the type of oil stored.
- Is of sufficient strength and structural integrity to ensure that it won't burst or leak in ordinary use.

BUNDED PLASTIC TANKS

BUNDED PLASTIC TANKS> DIESEL DISPENSING TANKS

EMP2350DD

¢

This double skinned, bunded diesel tank allows you to safely and easily dispense fuel using the automatic nozzle (complete with flow metre). The inner storage tank is fully contained within an outer tank which holds 110% of the maximum volume stored.

WASTE HANDLING ATTACHMENTS > RANGE INFORMATION

WASTE HANDLING EQUIPMENT

The original and safest to use waste handling skips available in the market:

- No wires.
- No pulleys.
- No climbing.
- Everything operates from the safety of the Fork Lift Truck's cab.

APPLICATIONS	CAPACITIES	MODEL
Typical use would be the collection of waste at "work stations" i.e. metal turnings from a CNC machine or wood off cuts from a saw mill, even general waste created during a working day. Because of their construction (fully welded "bucket") the ATS range is perfect for "wet" loads such as cutting fluid contaminated swarf from milling/CNC machines.	0.25m3 to 1.6m3 500kg to 1500kg	
Because the base of these models "drops away" they are not suitable for wet loads or powders. They are however ideal for; general waste, paper off cuts from guillotines and metal waste from stamping machines etc.	0.5m3 to 2.0m3 1000kg to 2000kg	
The "rolling" disposal action of the RFS range makes it highly suitable for heavy duty loads like concrete and brick rubble found on building sites.	0.5m3 to 1.5m3 1250kg to 1750kg	

SKIP CANOPIES

Skip Canopies give you control over access to your waste and help stop skips from filling with rainwater. Why pay to dispose of it or have it "wash" oily residues out of the skip and cause pollution.

APPLICATIONS	CAPACITIES	MODEL
Stop waste from being blown around.		
Stop rainwater accessing the skip.	10m3 to 12m3 Skips, Bespoke Skips	
Stop acts of vandalism.	available on request.	
Stop unwanted dumping and cross contamination.		

MOVE WASTE FROM THE PRODUCTION AREA TO THE WASTE SKIP SAFELY EASY TO OPERATE DEMONSTRATIONS **AVAILABLE VIA VIDEO ON OUR WEBSITE WWW.EMPTEEZY.CO.UK**

WASTE HANDLING

WASTE HANDLING ATTACHMENTS > PLASTIC BUCKET ROLL FORWARD SKIP

RFSP11L - ROLL FORWARD SKIP ON LEGS WITH A PLASTIC BUCKET

Fitted with a rotationally moulded polyethylene bucket, which can be replaced as and when required this roll forward skip is totally automatic; no wires and no climbing, just lower the bucket onto the edge of a skip to release then lower to lock after tipping the load. The bucket is fitted onto a painted mild steel base frame on fixed legs and it is also supplied with safety securing chains as standard.

SAFETY

Completely automatic operation, no wires, pulleys or handles it's all automatic. No climbing Fork Lift Truck masts to empty.

All operated from the safety of the cab. Retaining chains fitted as standard.

PLEASE NOTE:

Colour: Jaz Green (Shade of green may vary as we use recycled material, standard colours such as blue or yellow are available as special order items). **Tare weight:** 210kg

WASTE HANDLING ATTACHMENTS > SKIP CANOPIES

SKIP CANOPIES

Based on a solid H beam frame construction the canopy is created using Plastisol corrugated sheet cladding.

Options include: Fully seam welded sumps to contain any liquid leaking from the skip. Door systems to control access and fully contain loose, fly away waste and configurations to accommodate different numbers and sizes of the skips.

Note: As these units are built to your specific application we have to carry out a site assessment, this service carries no onus on you to purchase and is of course confidential and free of charge.

You will require a firm level concrete base to house the system on.

ACCESSORIES > FORK LIFT TRUCK ATTACHMENTS

Manufactured from mild steel and secured to the forklift using two screw clamps, this drum clamp is designed to lift 205ltr steel drums with rolling rings.

This drum fork allows two 205ltr drums to be lifted using rolling rings. Manufactured from mild steel the fork is secured to the forklift truck using two screw clamps.

HDF1

This hinged drum fork allows 205ltr drums to be switched from a vertical to a horizontal position, and vice versa, without the operator having to leave the cab.

Manufactured from mild steel the fork is secured to the forklift truck using a safety chain.

FIXED JIB - CJF1

This mild steel crane-jib attachment converts a forklift truck into a crane when attached using the two screw clamps. The unit, tested to 33 per cent overload capacity, comes with a safety swivel hook.

ADJUSTABLE JIB - CJE2

This mild steel crane-jib attachment converts a forklift truck into a crane when attached using the two screw clamps.

The jib has four horizontal positions which extend to a maximum of 3050mm. The unit, tested to 33 per cent overload capacity, comes with a safety swivel hook.
